

For PA7 one of the suggestions that I got was to make the sizing of the margins a % instead of a px count. I changed this because it looked alot better and even on different sized screens overall.

```
.main{  
  
    margin-top: 2.7%;  
    margin-bottom: 8%;  
    margin-right: 4.5%;  
    margin-left: 4.5%;  
    background-color: #1b2838 ;  
}
```

For my TA meeting Syndey said that my portfolio looked really good. The only feedback she was able to give was don't forget to make this document and finish up my artifacts.
